

MODULINER® HR 6003ML COMBINATION SEED DRILL

PALMERSTON NORTH – (14 July 2010) For large farms and contractors, KUHN now offers the MODULINER® concept.

This modular seeding unit consists of:

- a power harrow which can be equipped with a Maxipacker or Packliner roller;
- an undercarriage with the hopper and its linkage behind;
- and finally the seeding module or 8-row precision seed drill.

Note that the design of the tractor linkage and coulters means that the module is lowered gradually at the start of the field and raised gradually at the end.

The undercarriage has a 2800 litre hopper which is extendable to 3500 litres. The wheels are large: 710/45-26.5 (or 800/40-26.5 supplied as an option).

The transport dimensions of the machines stay below 3m.

The rear lift carries the seeding module equipped with 48 SEEDFLEX® seeding discs on a parallelogram and depth control wheels.

The two metering units are hydraulically controlled and supply either the line coulters with seeds or a single seed drill with fertiliser.

Overall control of the machine is handled by the T75 electronic control box connected to a joystick. Headland turns can be programmed sequentially: the driver only has to press a button twice!

The MODULINER® unit is distinguished by its ease of use, versatility and excellent manoeuvrability which make it suitable for use on small paddocks.
