

## ***KUHN HR 6040 R, HR 7040 R AND HR 8040 R POWER HARROWS INCREASE WORK OUTPUT SAFELY***

**PALMERSTON NORTH – (11<sup>th</sup> December 2017)** The new foldable power harrows HR 6040 R, HR7040 R and HR 8040 R (respective working widths of 6, 7 and 8m) are primarily aimed at all contractors and large crop farms looking to obtain **high productivity** and seeking solutions to **achieve seedbeds efficiently and safely, independently from the nature of the soils** whether for deep or shallow preparations, in spring or autumn, in dry or wet conditions.

The new design of these large width power harrows meet high criteria in terms of **reliability** and **productivity**, in order to match the most stringent requirements.

Designed for intensive use, these models comes with a **monitoring terminal** as standard. The terminal informs the driver in the cab if a torque limiter or oil temperature device is activated in one of the machine's three gearboxes.

Also, for a peaceful work, in the most intensive conditions, every effort has been made to provide **maximum reliability**. All components (central and side gearboxes with **oil circulation system**, casing, rotor drive, hitch, transmissions,...) as well as the drive chain of the HR 6040 R, HR7040 R and HR 8040 R have been developed so that they can be driven by tractors respectively of up to **460hp, 480hp and 500hp**.

The **very high work output** (which can reach 100 hectare prepared in one day) is not just linked to the substantial **working width** of these new power harrows HR 6040 R, HR7040 R and HR 8040 R.

The **HR 7040 R** is the **best compromise** in terms of working width and transport height. It folds to a **transport height of 3.75m** which is perfectly suited to road travel.

With continuous hydraulic adjustment of working depth and levelling bar, the machines are capable of adapting to varying soil conditions, resulting in great preparation and lower power consumption.

No compromise on the **quality of the seedbed preparation**, the essentials remain:

- 3.5 rotors/metre, the ideal solution for working in stony conditions as well as in large quantities of residues: no more stone piles on headlands.
- Indexed levelling bar on the roller, for perfect crumbling and fast adjustment, independent of working depth.

- Adjustable rotor speed, up to 500rpm resulting in effective crumbling, even in very dry clay soil.
- A wide range of equipment, wheel track eradicators, rollers... to adapt to any conditions.

The HR 6040 R, HR7040 R and HR 8040 R complete KUHN's range of power harrows which now features working widths from 1.2m to 8m, for tractors from 80hp to 500hp.

Kuhn is imported in New Zealand by C B Norwood Distributors Ltd.
