

## ***KUHN PERFORMER 3000 TINE/DISC DEEP STUBBLE CULTIVATOR AWARDED "PEOPLE'S CHOICE"***

**PALMERSTON NORTH – (13<sup>th</sup> November 2017)** The Terre-Net Machine of year in the «People's choice» category was awarded to the KUHN PERFORMER 3000, tine/disc deep stubble cultivator.

This new category awarded the PERFORMER, among more than 70 machines in competition, in an online vote that took place from January 25 to February 17, 2017 on the terre-net.fr website. Open to all internet users, a total of 700,000 votes were recorded for all machines. The "People's choice award" aims at distinguishing equipment recognition and the online mobilization capacity.

The PERFORMER is a "ONE PASS" tool offering four actions in a single pass: cutting, mixing or loosening, levelling and consolidation. During very short working periods, PERFORMER is the perfect tool for preparing the soil in depth in one pass. It allows work on all types of crop residues thanks to the independent or combined use of each component (two rows of discs, four rows of tines and a roller).

Used with a SH seed drill, PERFORMER is the ideal complement to sow canola seed and cover crops. This new model of 3 metre working width meets the expectations of European farms equipped with tractors of 180 to 350 horsepower and completes the range of PERFORMER 4, 5, 6 and 7 metres for tractors up to 700 hp.

The Performer range comprises of twin disc gangs (10cm working depth), four rows of tines (35cm working depth), levelling discs and the new 700mm diameter HD-Liner roller. The disc gangs function independently of each other and comprise 510mm diameter serrated discs. Discs are mounted to afford 560mm underbeam clearance, allowing free flow of crop residues.

Tines are arranged in four rows with 280mm inter-tine spacing and 850mm underbeam clearance. Tines are curved for optimum mixing and operate with non-stop hydraulic safety at 800–1,200kg pressure. A choice of shares is available for different functionality.

Levelling discs are mounted on curved arms, have elastomer protection and have height adjustable border discs. The HD-Liner roller is notched for better rotation and provides 225kg/m downward pressure. The roller can be lifted out of work when not required, for example when carrying out non-consolidation work.

Robust in construction, the Performer is designed for low maintenance in the toughest conditions. All discs are mounted on maintenance-free hubs and the tines are drop-forged for added strength.

Kuhn is imported in New Zealand by C B Norwood Distributors Ltd.
