

KUHN VB 3100 SERIES – DESIGNED BY KUHN, MADE BY KUHN

PALMERSTON NORTH – (5th March 2018) KUHN is offering a new generation of round balers enabling you to meet the challenges of tomorrow and designed with your main baling needs in mind. The VB 3100 series offers a wide range of variable chamber round balers to match your individual needs.

The **VB 3165 and VB 3195** premium XD balers, are designed to work in the heaviest conditions across the world and are also available as baler-wrapper combinations.

- ✓ **Proven, more refined intake system;** the wide cam-track pick-up unit on all our VB balers provides maximum ground adaption during baling. The pendulum capabilities of the cam-track unit keep the pick-up wheels in constant contact with the field surface providing more stability in all swaths. With our patented INTEGRAL ROTOR technology, an enormous throughput capacity is guaranteed at all times with the OptiCut cutting units, available with both 14 and 23 knives. The premium models also have GROUP SELECTION and DROPFLOOR technology.
- ✓ **A perfect bale formation, everywhere, any time** is ensured by the KUHN PROGRESSIVE DENSITY system and the smart bale chamber design. The proven PROGRESSIVE DENSITY bale chamber increases the baling pressure as the bale grows for a secure bale start and perfectly shaped bales. In addition to this, higher bale pressure settings on the VB 3165 and VB 3195 models can provide up to 10% more bale weight in drier crops. The proven net-binding system with stretch technology also assures a firm bale shape with consistent net tension throughout the entire binding cycle for secure and reliable binding of the bale. All the important baler settings, such as density, bale diameter and the number of times the bale is net bound can be conveniently set in the control terminal.
- ✓ **Having full control;** the key to achieving the productivity you expect from your KUHN machine, is a user-friendly interface. The new user interfaces and terminals provide a clear view of what your machine is doing at any time with all important settings at your fingertips, the premium models are fully ISOBUS machines.
