## **MEDIA RELEASE**

### **Kuhn GMD 3123F Front Mounted Disc Mower**

The GMD 3123 F front mower is designed for farms in need of a lighter machine for tractors from 80-90 hp. With its compact size and lighter weight, it is ideal for both flat and hilly areas. Its pendulum-type articulation with a range of + /- 12° allows it to follow ground contours perfectly!

The two standard swathing discs produce well calibrated swaths of an average size of 1.30 m. The machine is equipped with the latest generation OPTIDISC cutter bar that ensures a clean and regular cut in any conditions. The OPTIDISC cutter bar comes with exclusive features: isolation mounts, PROTECTADRIVE safety on the disc housings, easy FAST-FIT knife attachment to eliminate downtime: no oil change!

#### **Compact, lighter weight**

The GMD 3123F is ideally suited to medium-sized tractors: its lighter weight and reduced overhang contribute to great ground following.

Two springs that connect to the tractor keep ground pressure to a minimum in order to protect plant cover from damage. A powerful leaf spring keeps the machine perfectly stable during headland turns and on the road.

#### **Mowing quality, robustness**

The OPTIDISC cutter bar is reputed for its robustness. It has new special features that produce a perfect cut in all conditions.

The KUHN benefit: specific disc rotation that optimises cutting quality and crop flow-through to the centre of the machine to produce a swath of 1.20 to 1.40 m.

#### **FlexProtect**

In order to avoid damage when mowing along field edges or next to trees, the flexible external cover FlexProtect (exclusive) can bend and return to shape. This feature saves on repair costs.
